**RS-485/422 AND NMS MONITORING**

When the SATELLAR-1DS’s physical serial port is set to RS-485/422 mode, only one serial port will be available. This is due to a technical feature of the RS controller chip. **Therefore in RS-485/422 mode simultaneous DATA and NMS monitoring is not available.**

**IDENTIFYING THE RS-485/422 MODEL**

SATELLAR versions with RS-485 port can be identified by the label below the serial interface. The D-9 serial interface is located at the bottom of the radio unit (RU). The label states the serial interface protocols supported, as presented in the following image.
